

Vision

Sustainable Development—Sustainable Communities

Mission

The Department of Infrastructure and Planning's mission is to shape a sustainable future for Queensland.

We will achieve this by:

- delivering vital infrastructure and growth management solutions
- creating well-planned and managed communities with a focus on sustainability
- planning for the impact of climate change on urban growth, industrial development and the built environment
- leading whole-of-government approaches to land use, major project developments and infrastructure policy planning, coordination and delivery
- providing leadership and advice within government on the broader impact of land use planning, infrastructure and project development
- supporting project proponents—through facilitation services and timely advice on major projects and infrastructure—to deliver innovative solutions and value for money
- delivering a water infrastructure system that will ensure a sustainable water supply for the future
- identifying value-adding opportunities for Queensland's resources, and promoting public and private investment in infrastructure to build and protect Queensland's competitive advantages
- identifying and developing land throughout Queensland that is suitable for industrial development.

Values

We operate by five values:

Making a difference

We are performance driven, ensuring outcomes that contribute to the future of Queensland. We provide leadership across government and work with stakeholders and the community to deliver appropriate planning and infrastructure.

Professionalism

We conduct ourselves in a business-like manner to provide the highest quality services, fulfil our commitments and take ownership of the outcomes. We openly promote the economic, social and environmental benefits of an effective and disciplined risk management framework.

Innovation

We are committed to excellence through innovation, creativity, learning and knowledge sharing. We encourage staff to develop, achieve and show courage in making changes for the better.

Ethical conduct

We act in the public interest at all times and exercise fairness and impartiality. We are accountable, consistent and transparent in our decisions and actions.

Genuine community engagement

We operate with a strong community focus, seeking input and valuing the contribution of our diverse community. We consult, listen and promote understanding.

Note: For the purposes of this annual report, the vision and mission of the 2008–2012 Strategic Plan have been used as these include the planning function. However, performance has been reported against the 2007–2011 Strategic Plan.

Smart State Vision—A state where knowledge, creativity and innovation drive economic growth to improve prosperity and quality of life for all Queenslanders
