## Certification by the Suitably Qualified Person

As a suitably qualified person under Section 4.2 of the *Flora Survey Guidelines* (detailed in Appendix B), I certify that:

- a. I have adhered to all statutory requirements and *Flora Survey Guidelines* requirements,
- b. In the area surveyed I have not found plants (as detailed in this report) that are currently listed as extinct, extinct in the wild, critically endangered, endangered, vulnerable or near threatened in the *Nature Conservation (Plants) Regulation 2020*; and
- c. The flora survey report is an accurate and full account of the flora survey.

## 1.0 Introduction

Gladstone Area Water Board (GAWB) is a bulk water service provider based in Gladstone, Central Queensland. GAWB provides Raw Water (RW) and Treated Water (TW) to power stations and heavy industry, in and around Gladstone, and TW to the Gladstone Regional Council (GRC) for municipal water supply.

As a commercialised statutory authority, GAWB is expected to operate commercially and provide return on the value of its assets. As a monopoly service provider, GAWB's water pricing is subject to regulatory review by the Queensland Competition Authority (QCA) prior to commercially resetting water prices every five years.

### 1.1 The project

Installed in 1981, the East End Treated Water pipeline (the EETW pipeline) comprises 23.3 km of DN300 Ductile Iron Cement Lined (DICL) and Asbestos Cement (AC) pipeline. The EETW pipeline is fed from the existing Boat Creek Pump Station (BCPS) to East End Reservoir (EER). The BCPS is gravity supplied by Mt Miller Treated Water Reservoir (MM TWR), via 3.5 km of DN300 DICL pipeline. As the only pipeline delivering water along this alignment, most customers use the TW for RW purposes. GAWB supplies this TW at a reduced price.

GAWB has recently installed a water connection from the EETW pipeline for Economic Development Queensland (EDQ) to an area located off Aldoga Drive in the Gladstone State Development Area (GSDA) between Gladstone and Mt Larcom (refer Figure 2).

With the completion of the EDQ TW pipeline and further onset of new customers associated with hydrogen production and other activities, an increased demand for RW exceeding the capacity of the existing EETW pipeline is forecast. GAWB has elected to install a new RW pipeline and, due to its poor condition, replace the existing EETW pipeline with a new TW pipeline for its entire length.

The purpose of this project is to replace the existing EETW pipeline from BCPS to EER and make provision for a new Aldoga Raw Water (ARW) pipeline.

A larger feasibility study has recently been complete (by others), planning major changes to the RW network and its interfaces with the Northern Industrial Zone (NIZ).

A new RW Pump Station will be required for the ARW pipeline (Landing Road Raw Water Pump Station (LR RWPS), in the vicinity of BCPS. The location of the LR RWPS is confirmed to be adjacent to the existing EETW pipeline, roughly 1 km downstream of the BCPS.

A new RW reservoir is to be constructed at Aldoga from which new customers can be supplied. The Mylrea Road Reservoir (MRR) will be constructed outside of this scope. The site of the future MRR has been confirmed but AECOM's scope will only extend as far as the Euroa Circuit RW pipeline, with the final 400 m of pipeline to the MRR (Euroa Circuit to CQ-H2 RW pipeline) by others. These updates are not considered any further in this report.

### 1.2 Project site

The EETW and ARW pipelines are located approximately 15 km west of Gladstone, in Central Queensland. Beginning at the BCPS in Yarwun, the EETW pipeline offsets, and crosses Gladstone Mount Larcom Road and crosses the Bruce Highway through Aldoga and into the EER site (refer Figure 1). Beginning at the Mt Miller (Hanson Road) to Landing Road pipeline, the ARW pipeline crosses Gladstone Mount Larcom Road into Aldoga, connecting to Euroa Circuit to CQ-H2 RW pipeline (refer Figure 1).

### 1.3 Project area and study area

For this report, the Study Area consists of the project area with a 100m buffer on either side of the pipeline alignment. The Project Area and the Study Area have been developed and assessed to understand the ecological values in the area surrounding the Project, and to determine the direct and

indirect impacts of project activities on these values. The Project Area and Survey Area are displayed in Figure 3 and Figure 4 respectively.

## 1.4 Project scope

The current scope of this design project includes:

- Separable portion 1 (Tranche 1) consists of the replacement of 8.7 km of EETW pipeline from the BCPS to the EDQ TW pipeline (CH1,900 – CH10,600) inclusive of the associated pump capacity upgrades.
- Separable portion 2 (Tranche 2) consists of the replacement of 14.4 km of EETW pipeline from the EDQ TW pipeline to EER (CH10,600 – CH25,000).
- Separable portion 3 (Tranche 3) consists of an ARW pipeline from the LR RWPS to the Euroa Circuit to CQ-H2 RW pipeline and Euroa Circuit RW pipeline (CH0 – CH8,200).
- Separable portion 4 (Tranche 4) consists of conducting all site and land tenure investigations for the works.

Figure 4 Survey Area (Clearing Impact Area and Flora Trigger mapping)

## 1.5 Purpose of this Document

AECOM Australia Pty Ltd (AECOM) has been commissioned by GAWB to undertake an environmental assessment to support the replacement of a pipeline between Boat Creek and East End, known as the East End pipeline (the Project). As part of this commission, AECOM has completed a protected plant survey for the Project in accordance with the requirements of the *Nature Conservation Act 1992* (NC Act), as the Project will directly impact vegetation which is captured within the Protected Plants Trigger Mapping overlay. This report is a flora survey report that meets the *Flora Survey Guidelines – Protected Plants Version 2.01 (Flora Survey Guidelines)* (Department of Environment and Science, 2020). Any clearing must meet Section 141 of the *Nature Conservation (Plants) Regulation 2020* (NCP Regulation).

The Flora Survey Report is intended to document the flora surveys across the Project, in line with relevant NC Act legislation. This was conducted due to sections of the Project intersecting state mapped Protected Plants Trigger Mapping. This document records the following:

- Establish a suitably qualified person to conduct the flora surveys.
- Document preliminary assessments, such as flora trigger mapping, and nearby protected plant sightings
- Establish a suitable methodology for finding and recording protected plants
- Record vegetation types within the Clearing Impact Area (CIA).

The targeted flora survey area is in the eastern half of the Project, east of the red mud repository. Figure 1 shows the Project overview, and Figure 3 and Figure 4 shows the location of the proposed disturbance footprint (Project Area), the Clearing Impact Area (CIA) and the Flora Survey Trigger Mapping.

## 2.0 Legislative Context

### 2.1.1 Nature Conservation Act 1992

The *Nature Conservation Act 1992* (NC Act) prohibits the taking or destruction, without authorisation, of protected flora and fauna species in the wild. All native plants and animals in Queensland are protected under Section 71 of the NC Act. This Act also provides for an integrated and comprehensive approach to conserving nature. It provides a legislative basis for research, community education, dedicating, declaring and managing protected areas, and protecting native wildlife and its habitat.

Appropriate authorisations or permits under the NC Act are required prior to clearing of listed conservation significant plant species, interfering with an animal breeding place, or removing protected animals unless the activity is exempt.

### 2.2 Protected Plants Framework

Within the NC Act, provisions exist for the regulation or restricted taking or using of protected plants.

Activities that affect protected plants are regulated under the subordinate Nature Conservation (Plants) Regulation 2020 (NCP Regulation), which requires a flora survey be carried out where areas of clearing are to occur within high-risk areas shown on the flora survey trigger map. High risk areas generally capture suitable regional ecosystems within 2 kilometres (km) of known locations of critically endangered, endangered, vulnerable, or near-threatened plants.

Where clearing is proposed within a high-risk area, a flora survey is required to determine the presence of protected plants within the clearing impact area. The flora survey method and format for the associated report required under the NC Act are defined by the Flora Survey Guideline (Department of Environment and Science, 2022). The flora survey must then be lodged with DESI to either obtain an approval, or an exemption notice if no threatened species are identified within the clearing impact area.

A protected plants survey is required under the Queensland NC Act if:

- Areas proposed to be cleared are located within a high-risk area of the Flora Survey Trigger Map.
- ‘Critically Endangered’, ‘Endangered’, ‘Vulnerable’, or ‘Near Threatened’ species (threatened plants or near threatened plants) are known to be present in areas proposed to be cleared.
- No relevant exemptions apply.

The Project Area intercepts a high-risk area on the Flora Survey Trigger Map (version 10.0) provided by the Department of Environment and Science and Innovation (DESI), displayed on Figure 4 and Appendix A). No relevant exemptions are applicable to the Project. Therefore, any clearing must meet Section 141 of the NCP Regulation.

This report is a flora survey report that meets the *Flora Survey Guidelines – Protected Plants Version 2.01* (Department of Environment and Science, 2020).

## 3.0 Objectives

### 3.1 Primary Objective

The primary objective of the flora survey is to complete a survey of the presence and abundance of threatened and / or near threatened plants within the Project area, to the extent it is within a high-risk area, and an additional buffer zone which is 100 meters (m) in width. The Project Area and the 100 m buffer area are jointly defined as the Clearing Impact Area (CIA), as per the *Flora Survey Guidelines*.

Where threatened and / or near threatened plants are identified within the CIA, an application for a protected plants clearing permit, accompanied by an Impact Management Plan, is required to be submitted to DESI. Alternatively, if no threatened plants or near threatened plants are identified, the proposed clearing is classified as exempt. DESI must be notified of any clearing; however, a clearing permit is not required.

### 3.2 Reporting Requirements

Section 7.2 of the *Flora Survey Guidelines* outlines the reporting requirements for a flora survey report for clearing within a high-risk area. These requirements are outlined in Table 1 below.

Table 1 Reporting requirements under the *Flora Survey Guidelines*

Reporting Requirements	Section within this Report
<b>Certification by a suitably qualified person</b>	
Documentation to support that a suitably qualified person conducted the protected plant survey.	Appendix B.
<b>Extent of area surveyed</b>	
A detailed map or plan of the area, showing the area to be cleared, the buffer zone, the properties included and excluded from the survey area.	Figure 3, Figure 4 and Section 4.1.
Justification/s for removing any area/s from the buffer zone under section 134(2), or section 5.2 of the <i>Flora Survey Guidelines</i> .	The full CIA was surveyed for the Project impact area, however Section 4.5 details any limitations.
A GIS shapefile of the area to be cleared, the clearing impact area and the extent of on-ground surveys taken.	Shapefiles can be provided on request, data provided on Figure 5.
<b>Flora survey methods and findings</b>	
The lists compiled during the desktop assessment of habitat types and threatened plants or near threatened plants that may occur in these habitat types.	Section 5.1.
The flora survey method selected and justification that the method was appropriately comprehensive considering the lists compiled during desktop assessment.	Sections 4.3 and 4.5.
A detailed map or plan of the area, showing the habitat types, the location of threatened plants or near threatened plants and possible threatened plants or near threatened plants found.	Figure 5.

Reporting Requirements	Section within this Report
A copy of the WildNet data entry form that was submitted to <a href="mailto:WildNet@science.dsitia.qld.gov.au">WildNet@science.dsitia.qld.gov.au</a> , completed in accordance with the WildNet Data Entry Form Guidelines, and including all identified threatened plants or near threatened plants.	Not applicable given threatened species were not identified.
Details from threatened plants or near threatened plants population/plot surveys for each threatened plant or near threatened plant and possible threatened plant or near threatened plant found.	Not applicable given threatened species were not identified.
A description of all possible threatened plants or near threatened plants found, including their supporting habitat.	Not applicable given threatened species were not identified.
Justification of the timing of the flora survey and detail of any limitations associated with the timing of the survey.	Sections 4.3, 4.4 and 4.5.
Justification for any alternative plot size used.	Not applicable.
Other	
The date or dates any clearing is proposed to occur.	Section 6.0.

## 4.0 Methods

### 4.1 Survey Area

Section 5 of the *Flora Survey Guidelines* outlines the statutory requirements for determining the extent of the area to be surveyed, as per the NCP Regulation. This is termed the CIA, which equates to the ‘area to be cleared’ (to the extent it is within a high-risk area) and an additional ‘buffer zone’. Limitations to accessing the entire CIA are outlined in Section 4.5.

For this Project, the CIA is calculated by determining the areas within the Project area that are intersected by the Flora Survey Trigger Map, and buffering this area by 100 m. The survey took place in the blow lot plans in Table 2.

Table 2 Survey area lot plans

### 4.2 Desktop Assessment

The *Flora Survey Guidelines* states that a suitably qualified person must undertake a desktop assessment prior to the field assessment. A desktop assessment was undertaken to identify the habitat types occurring within the CIA and potential threatened plants or near threatened plants that may occur in each habitat type. The following sources were consulted:

- Protected Plants Flora Survey Trigger Map V.10. (Department of Environment and Science, 2024a).
- EPBC Act Online Protected Matters Search Tool (PMST) (Department of Climate Change Energy the Environment and Water, 2024).
- WildNet database (Department of Environment and Science, 2024b).
- Atlas of Living Australia database (ALA) (Atlas of Living Australia, 2024).
- Regional Ecosystem Description Database (REDD) and mapping (Queensland Herbarium, 2024).
- Regulated Vegetation Management Map (Department of Resources, 2024).

- Aerial imagery to investigate the nature and extent of habitat types within the CIA (Q Imagery, 2024).
- Species distribution maps and information from various field guides.

### 4.3 Field Assessment

The *Flora Survey Guidelines* states that a suitably qualified person must undertake a field assessment using one or more of the following methods:

- A timed meander survey (Section 6.2.2 of the *Flora Survey Guidelines*).
- A systematic transect survey (Section 6.2.3 of the *Flora Survey Guidelines*).
- An alternative method if agreed in advance by the chief executive (Section 6.2.4 of the *Flora Survey Guidelines*).

A timed meander survey was determined to be the best method for field survey and followed the method outlined in the *Flora Survey Guidelines* and described in (Williams & Clouten, 2021). This required an assessment of habitats across the survey area and determining the number of meanders required per habitat. Timed meander surveys involved traversing each habitat type in a random manner, recording any threatened plants or near threatened plants observed. If threatened plants or near threatened plants are observed, specimens must be collected, and locational data recorded. Specimen collection and voucherizing should be in accordance with the Queensland Herbarium manual (T. Bean, 2016). The meander should continue until no new threatened plant or near threatened plant species is recorded for 30 minutes, or when the entire area of habitat type is surveyed, whichever happens sooner.

During the field survey, any flora specimens which could not be identified, and were suspected to be either threatened or near threatened species, were collected, pressed and dried in accordance with the Queensland Herbarium procedures (T. Bean, 2016). Identification of specimens was undertaken through comparison with named material and using taxonomic keys. Where a specimen could not be identified to species level, and it was not confidently concluded that it was not a threatened or near threatened species (in accordance with section 261S of the Regulation) it was to be lodged with the Queensland Herbarium for formal identification.

Taxonomic nomenclature cited in this document is based on *The Census of Queensland Flora 2021* (A. R. Bean, 2021). Where a flora species has been identified as introduced it has been identified by an asterisk (\*).

### 4.4 Timing of the Survey

A flora survey for threatened plants or near threatened plants should be undertaken when the target species are most likely to be identifiable to species level. There are two main considerations when determining the timing of a survey:

- The plant life strategy.
- The flowering and/or fruiting period.

Consideration to the life cycle of target flora species should be given when determining the most appropriate time to undertake the required flora survey. Annual species are plants which have their entire life cycle in a single growing season. Dormant seeds from the previous growing season will germinate and create the next generation of plants. Perennial species continue to grow year after year, and therefore are always visible as above ground herbaceous or woody forbs, shrubs and trees. The results of the desktop component of this assessment indicate that all threatened or near threatened flora species which have the potential to occur within 10 km of the Project area have a 'Perennial' life strategy, as detailed in Section 5.1.3.

It is noted that the identification of many plants to species level is dependent on the presence of reproductive material. Therefore, for accurate identification, many flora species require a survey to be undertaken during the flowering and / or fruiting period. This is particularly relevant to small and / or inconspicuous species, which are more observable when they are flowering. However, the near

threatened species, *Cerbera dumicola*, that was collected closest to the Project area and is responsible for the risk area covering the site, was easily observed by AECOM ecologists 1.1 km away from the Project. That is, there is a high confidence of observing this glossy shrub if it were to grow in the Project area.

This desktop assessment has considered the life strategy and flowering and / or fruiting period for each potential threatened and / or near threatened flora species identified as having the potential to occur within the Project area. One exception to this is the Mt Larcom stink bush (*Zieria actites*) which is considered unlikely to occur but has been included as the species is listed Critically Endangered under the NC Act and has been recorded within 5 km. The findings of this review informed the timing of the flora survey, as detailed in Section 5.1.3.

## 4.5 Limitations

The following assumptions and limitations apply to the assessment:

- This is a standalone assessment and report to inform NC Act requirements for a clearing permit application (if required). As such, the survey and survey report did not assess the requirements for any permits or approvals to clear or disturb any matters of national significance listed under the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) or any vegetation community under the Queensland *Vegetation Management Act 1999* (VM Act) nor is the conservation status of species and communities listed under the EPBC Act or VM Act discussed.
- Information gained from online flora databases (Section 4.2) have caveats attached regarding the robustness or completeness of the information. Data is based on a combination of records (from various sources) combined with modelled distributions of species according to their ecological characteristics. The presence or absence of species identified from these databases is an indication of potential presence only, and not a definitive list.
- Data acquisition during flora surveys generally has inherent limitations associated with variability of vegetation communities across any given site, as well as the changes to the ease of detectability and presence of species with time (i.e., because of a species 'life-strategy', and the flowering and / or fruiting period).
- It is considered that the seasonal conditions occurring at the time of the completion of this survey were conducive to a relatively high degree of detectability for a diverse group of flora species. Notwithstanding this, it is recognised that field studies with a temporal limitation cannot always account for 100% of potential floral diversity present within a site.
- The assumption and limitations relating to the timing of the survey is described in Section 4.4 above.

## 5.0 Results

### 5.1 Desktop Assessment

#### 5.1.1 Biogeographical context

The CIA is located within the Brigalow Belt Bioregion which stretches from Townsville to the south of the Queensland - New South Wales border. As a result, the floristic composition and structure within this region varies considerably. The region is characterised by Brigalow (*Acacia harpophylla*), a root suckering tree that grows to 25 meters high. The ecological community of the Brigalow occurs roughly within the 500-750 mm annual rainfall belt with a predominance of summer rainfall, with winter rainfall peaking in the south of the distribution whereas the western area is more arid (Johnson, 1997).

Within the Brigalow Belt Bioregion, the CIA is contained within the Mount Morgan Ranges subregion, which is characterized by seasonal rainfall with higher rain in summer (November – April), and low rainfall between May-October (dry season). The subregion received a long-term mean rainfall of 783 mm as of 2006.

The easternmost extent of the Project occurs in the Southeast Queensland bioregion within the Burnett – Curtis Hills and Ranges subregion. However, the CIA does not occur in this section of the Project.

#### 5.1.2 Vegetation and Habitat Types

In Queensland, remnant vegetation is described and mapped by the Queensland Herbarium as Regional Ecosystems (REs). REs are broad plant communities within a bioregion that consistently occur in association with a particular combination of geology, landform and soil (Sattler & Williams, 1999). REs are generally defined at a scale of 1:100,000 across the state of Queensland. The regulated RE maps are available on the ‘Regulated vegetation management map’ (Department of Resources, 2022).

The extent, classification and condition of ground-truthed vegetation communities within the Project area were validated in accordance with the *Methodology for surveying and mapping regional ecosystem and vegetation communities in Queensland* (Neldner et al., 2019). This involved traversing the Project area and undertaking tertiary and quaternary level assessments.

Vegetation within the CIA comprises four REs, as well as vegetation identified as non-remnant. The vegetation communities identified within the CIA are detailed within Table 3, below. The short RE descriptions provided within this table are drawn from the REDD (Queensland Herbarium, 2023).

In accordance with the *Flora Survey Guidelines*, habitat types present within the CIA have been identified. Results from the field assessment identified four distinct habitat types as present within the proposed CIA. Habitat types were primarily determined by grouping vegetation communities (inclusive of mapped REs and non-remnant vegetation) with similar underlying geology, dominant canopy species and landscape aspect (Table 3).

There were four habitat types identified at the site. The first is eucalypt woodland on alluvial plains, which is characterised by eucalypt open woodland dominated by *Eucalyptus tereticornis* or *E. camaldulensis* in alluvial areas or fringing drainage lines. The second habitat is eucalypt woodland on metamorphic rocks, characterised by *E. crebra/E. moluccana* woodland on old sediments and coastal ranges. The site is also characterized by non-remnant grassland habitat and a small section of the CIA intersects a waterhole.

Table 3 Habitat types within the CIA

Habitat Type	GTREs	RE Description <sup>1</sup>
<b>Habitat Type 1</b> Eucalypt woodland on alluvial plains	Remnant 11.3.4	<i>Eucalyptus tereticornis</i> and/or <i>Eucalyptus</i> spp. woodland on alluvial plains.
	Remnant 11.3.25	<i>Eucalyptus tereticornis</i> or <i>E. camaldulensis</i> woodland fringing drainage lines.

Habitat Type	GTREs	RE Description <sup>1</sup>
<b>Habitat Type 2</b> Eucalypt woodland on metamorphic rocks	Remnant 11.11.4c	<i>Eucalyptus crebra</i> woodland on old sedimentary rocks with varying degrees of metamorphism and folding. Coastal ranges. <i>Eucalyptus moluccana</i> dominated woodland.
	Remnant and Regrowth 11.11.15	<i>Eucalyptus crebra</i> woodland to open woodland on deformed and metamorphosed sediments and interbedded volcanics.
Non remnant	-	Non remnant grasslands, bare ground and isolated shrubs.
Water	-	Small section of waterhole.

<sup>1</sup> RE descriptions derived from Queensland Herbarium, 2024.

### 5.1.3 Threatened Flora Species

A search was conducted of the Protected Matters Search Tool, WildNet and the ALA databases using three co-ordinates of the Project area (easternmost point -23.8195243, 151.1542374; westernmost point -23.8680088, 150.9625847 and centroid -23.854686, 151.059871), and applying a 10 km buffer around each of these points (Appendix C). The results of the database searches identified eight threatened plants with the potential to occur within a 10 km radius of the Project. A desktop assessment of each species is outlined in Table 4.

Table 4 Threatened and near-threatened flora species which have the potential to occur within the CIA

Species Name; Status (NC Act) <sup>1</sup>	Life Strategy	Flowering Period	Potential limitations in locating Species	Distribution	Habitat Preference	Optimal Survey Period	Image
<i>Atalaya collina</i> ; Endangered	Perennial	Flowers have been recorded in November and ripe fruits are present in December (Barry & Thomas 1994). The flowers attract a large number of bees (Department of the Environment, 2008).	<i>Atalaya collina</i> is broadly similar to <i>Atalaya multiflora</i> and there was some doubt as to whether it should be recognised as a distinct species.	This species is known from only two populations in Queensland: west of Gladstone at Yarwun and near Ubobo, west of Miriam Vale (Department of the Environment, 2008).	<i>Atalaya collina</i> occurs in semi-evergreen vine thicket or dry rainforest. Surface soils are moderately drained, brownish-black clay loams overlying clay subsoils. Both known populations occur in partially cleared highly disturbed areas (Department of the Environment, 2008)	Wet season or post wet season is the best time for identification.	 <p>(Royal Botanic Gardens Victoria, 2020)</p>
<i>Cupaniopsis shirleyana</i> ; Vulnerable	Perennial	<i>C. shirleyana</i> flowers mainly in May to July, occasionally January or March.	None, small shrub with distinctive branches, flowers and leaves.	<i>Cupaniopsis shirleyana</i> is restricted to southeast Queensland, from Brisbane, north to Bundaberg. It occurs in Pine Mountain Reserve, Mt Gravatt, Cold Creek State Forest and Miva State Forest.	<i>Cupaniopsis shirleyana</i> occurs at 20 to 550 m elevation. Recorded in a variety of rainforest types including vine thicket and dry rainforest. Occurs on hillsides, mountain tops, lower slopes of valleys, stream beds and along riverbanks. Grows in a variety of soil types (Department of the Environment, Water, Heritage and the Arts, 2008).	None, can be identified at any time of the year.	 <p>(Fagg, 2018)</p>

Species Name; Status (NC Act) <sup>1</sup>	Life Strategy	Flowering Period	Potential limitations in locating Species	Distribution	Habitat Preference	Optimal Survey Period	Image
<i>Cycas megacarpa</i> ; Endangered	Perennial	Fruiting cones are produced between the months of May and February. Seeds become ripe from March onwards and drop from the tree. Species is distinguished from <i>C. ophiolitica</i> by the green new growth and larger seeds. It is distinguished from other <i>Cycas</i> species by the keeled green leaves and larger seeds.	None, distinctive green growth can be used to distinguish from other <i>Cycas</i> species.	<i>C. megacarpa</i> is endemic to Queensland, occurring from Mackay to Goonan in Central Queensland.	<i>Cycas megacarpa</i> occurs in spotted gum ( <i>Corymbia citriodora</i> subsp. <i>variegata</i> ) and narrow-leaved ironbark ( <i>Eucalyptus crebra</i> ) woodland and open forest with a grassy understorey. It has also been recorded on rainforest margins. The species usually grows on hill tops and steep slopes. It is found on varying top-soils; commonly sandy loams or shallow clay loams which are often stony. <i>C. megacarpa</i> occurs at altitudes of 40-600m above sea level. (Queensland Herbarium, 2007)	None, can be identified at any time of the year.	 (Forster et al., 2008)
<i>Dansiea elliptica</i> ; Near Threatened	Perennial	<i>Dansiea elliptica</i> has been recorded flowering in January and May		<i>D. elliptica</i> is recorded from three localities in the Wet Tropics, within Dinden National Park, Wooroonooran National Park in northern Queensland and Rundle State Forest and Deep Water National Park in central Queensland.	<i>Dansiea elliptica</i> occurs in lowland dry rainforest and vine thicket (notophyll vine forests, semi evergreen vine thickets) on substrates derived from greywacke (southern populations) or rhyolite and basalt (northern populations). Species associated with <i>D. elliptica</i> from a site in semi evergreen vine thicket include <i>Flindersia australis</i> and <i>Casuarina cristata</i> . In the Rundle Ranges, species such as <i>Gossia bidwillii</i> , <i>Drypetes deplanchei</i> , <i>Planchonella cotinifolia</i> , <i>Pleiogynium timorense</i> and <i>Terminalia porphyrocarpa</i> occur with <i>D. elliptica</i> . In notophyll-mesophyll rainforest in north east Queensland, associated species include a canopy of <i>Polyscias elegans</i> , <i>Flindersia</i> spp., <i>Elaeocarpus eumundi</i> , <i>Synima</i> , <i>Cryptocarya mackinnoniana</i> and <i>Cryptocarya vulgaris</i> on soil derived from rhyolite (Pollock, 2018).	None, can be identified at any time of the year.	 (Australian National Botanic Gardens, 1997)
<i>Graptophyllum excelsum</i> ; Near Threatened	Perennial	Flowers occur October to February	None, distinctive leaves and leaf pairs.	The species occurs along the coastal regions from northern to southern Queensland. Populations are recorded at Dimbulah, Chillagoe, Townsville, Charters Towers, Kelsey Creek west of Proserpine, and most commonly at Mount Etna and Chillagoe-Mount Mungana areas (Queensland Department of Environment and Science, 2019)	<i>Graptophyllum excelsum</i> occurs in semi-evergreen vine thickets, although near Chillagoe the species has also been recorded growing in grassy woodland in association with <i>Eucalyptus cullenii</i> and <i>Corymbia erythrophloia</i> . Other associated species include <i>Macropteranthes</i> sp., <i>Gyrocarpus americanus</i> , <i>Lysiphylgium hookeri</i> , <i>Acacia fasciculifera</i> , <i>Brachychiton australis</i> , <i>Polyscias elegans</i> , <i>Archidendropsis thozetiana</i> , <i>Gossia bidwillii</i> , <i>Alstonia constricta</i> , <i>Alyxia ruscifolia</i> and <i>Alchornea ilicifolia</i> (Pollock, 2018).	Wet season is the best time for identification.	 (Townsend, 2007)

Species Name; Status (NC Act) <sup>1</sup>	Life Strategy	Flowering Period	Potential limitations in locating Species	Distribution	Habitat Preference	Optimal Survey Period	Image
<i>Macropteranthes leiocaulis</i> ; Near Threatened	Perennial	Flowers from December to January and fruits from January to February.	This species is very similar to <i>Macropteranthes fitzalanii</i> . According to Forster (1994), <i>M. leiocaulis</i> is distinguished from the former species by the hairy calyx tube, the bracteoles shorter than the calyx and the shorter flower pedicels.	Occurs in Central Eastern Queensland, known from Mingela Bluff south of Townsville to Binjour Plateau west of Maryborough.	<i>M. leiocaulis</i> grows in deciduous vine thickets, semi-evergreen vine thickets and araucarian microphyll vine forests on red eucrozems or sandstone talus (CSIRO, n.d.).	Wet season is the best time for identification.	 QUEENSLAND HERBARIUM (BR) - Brisbane Australia AQ 855838 BRI-AQ085838
<i>Sphaeromorpheaa major</i> ; Near Threatened	Perennial herb	Flowers and fruits September–April	Distinguished from other species in the genus by the relatively long achenes and florets, the narrow leaves lacking resin globules, and the frequent presence of pappus bristles.	Known from some coastal locations near Rockhampton, Queensland, and at 3 inland locations in central Queensland.	It grows in coastal salt marsh, and on the margins of artesian springs in open salt-affected areas (Atlas of Living Australia, n.d.).	Spring to autumn is the best time for identification.	 (Fielder, 2017)

Species Name; Status (NC Act) <sup>1</sup>	Life Strategy	Flowering Period	Potential limitations in locating Species	Distribution	Habitat Preference	Optimal Survey Period	Image
<i>Zieria actites</i> ; Critically Endangered	Perennial	Flowers, fruit and seed have been collected from September to May	<i>Z. actites</i> is similar to <i>Z. compacta</i> , however, <i>Z. actites</i> differs in the leaf laminae being glabrous below, the midrib is not impressed above, the leaflet margins are thickened and maybe slightly recurved and smaller petals. <i>Z. actites</i> can be distinguished from <i>Z. montana</i> in having slightly decurrent leaf bases on the young branches only and crenulate leaf margins (Duretto & Forster, 2007).	<i>Zieria actites</i> is endemic to Queensland and is presently known from a single locality at Mt Larcom west northwest of Gladstone within the Brigalow Belt Bioregion (Duretto and Forster 2007; Queensland Herbarium, 2012).	<i>Zieria actites</i> is found only at Mt Larcom. The species grows in open woodland/shrubland in crevices and clefts on exposed outcrops and cliff lines on quartz alunite at approximately 630m asl (Duretto & Forster, 2007)	Spring to autumn is the best time for identification.	 (Fagg, 2015)

## 5.2 Field Assessment

A field survey was undertaken by a suitably qualified person on 12 to 13 August 2024 in accordance with the *Flora Survey Guidelines*. The timing of this survey is considered suitable to observe the species identified, based on the desktop assessment which has considered the limitations and timing as relevant to locating each of the identified species (Section 5.1.3). Limitations to this survey are further outlined in Section 4.5.

### 5.2.1 General Site Description

The site contains four habitat types. The first habitat is eucalypt woodland on alluvial plains, comprising a mix of RE 11.3.4 and 11.3.25, *E. tereticornis* or *E. camaldulensis* in alluvial areas or fringing drainage lines. The second habitat is Eucalypt woodland on metamorphic rocks comprising of RE 11.11.4c and 11.11.15 (*E. crebra* or *E. moluccana* dominant woodland on old sedimentary rocks and coastal ranges). Some of this habitat is classified as regrowth vegetation. There is non-remnant grassland throughout the CIA and there is a small section of water present from a waterhole. The Project is close to the Calliope Conservation Park to the south, an MSES protected defined forest area (D-DRDU012) managed by the Department of Agriculture and Forestry. The south of the alignment is freehold land mapped as a forest consent area (2015/003340) (Queensland Government, 2022).

### 5.2.2 Timed Meander Survey

As per Section 6.2.2 of the *Flora Survey Guidelines*, timed meander surveys must be undertaken (at a minimum) at the following rates per habitat type:

- < 2 ha, one meander.
- Between 2 to 10 ha, two meanders.
- Between 10 to 100 ha, four meanders.
- >100 ha, six meanders.

Table 5 identifies the minimum number of timed meander surveys that must be undertaken in each habitat type, and the number completed during the field survey. Figure 5 shows the CIA, the location of each habitat type and a record of the timed meander survey tracklog. Non-remnant areas were highly modified environments not subjected to field surveys because of the very low likelihood of finding any threatened or near threatened plant and if those plants were found, they would not be considered growing in the wild.

**Table 5 Timed meander survey required and completed in each habitat type**

Habitat type	RE	Area (ha) within CIA	Number of Timed Meander Survey	
			Required	Completed
Eucalypt woodland on alluvial plains	11.3.4, 11.3.25	6.41 ha	2	2
Eucalypt woodland on metamorphic rocks	11.11.4c, 11.11.15	7.33 ha	2	2
Non-remnant grasslands	-	12.62 ha	0	0
Water	-	0.09 ha	0	0

### 5.2.3 Flora Species

A total of 174 flora species were observed during the field survey (Appendix D). No threatened flora species were found during the survey. Several near threatened *Cerbera dumicola* were observed by AECOM ecologists 1.1 km east of the Project (but none were found in the Project area or CIA). Their distinctive glossy foliage provides confidence that they would have been observed during the site survey if they were present. This survey is considered sufficient to determine the potential for protected plants to be directly and indirectly impacted by the Project.

## 6.0 Conclusion and Recommendations

This report details a flora survey conducted by a suitably qualified person in accordance with the *Flora Survey Guidelines*. Surveying was completed on 12 to 13 August 2024, consisting of four timed meander surveys in two habitat types. No threatened or near threatened flora species were observed within the CIA.

As protected plants were not identified within the CIA, and the survey met the requirements outlined in the *Flora Survey Guidelines*, a protected plants clearing permit will not be required for the Project to proceed. A Protected Plants Clearing Exempt Notification Form and this report is to be submitted to DESI at least one week prior to any clearing works and within one year of the flora survey (before 12 August 2025), and clearing is undertaken within three years of submission.

## **Flora Survey Trigger Mapping**

### Protected Plants Flora Survey Trigger Map

- High risk area
- Other land parcel boundaries
- Freeways / motorways / highways
- Secondary roads / streets
- Coordinates

This map shows areas where particular provisions of the Nature Conservation Act 1992 apply to the clearing of protected plants.

Land parcel boundaries are provided as locational aid only.

This map is produced at a scale relevant to the size of the area selected and should be printed as A4 size in portrait orientation.

# Protected plants flora survey trigger map

The protected plants flora survey trigger map identifies 'high risk areas' where endangered, vulnerable or near threatened plants are known to exist or are likely to exist. Under the *Nature Conservation Act 1992* (the Act) it is an offence to clear protected plants that are 'in the wild' unless you are authorised or the clearing is exempt, for more information see [section 89](#) of the Act.

Please see the Department of Environment and Science webpage on the [clearing of protected plants](#) for information on what exemptions may apply in your circumstances, whether you may need to undertake a flora survey, and whether you may need a protected plants clearing permit.

## Updates to the data informing the flora survey trigger map

The flora survey trigger map will be reviewed, and updated if necessary, at least every 12 months to ensure the map reflects the most up-to-date and accurate data available.

## Species information

Please note that flora survey trigger maps do not identify species associated with 'high risk areas'. While some species information may be publicly available, for example via the [Queensland Spatial Catalogue](#), the Department of Environment and Science does not provide species information on request. Regardless of whether species information is available for a particular high risk area, clearing plants in a high risk area may require a flora survey and/or clearing permit. Please see the Department of Environment and Science webpage on the [clearing of protected plants](#) for more information.

# **Appendix B**

**Suitably Qualified  
Person**

## Appendix B    Suitably Qualified Person

### Certification by a Suitably Qualified Person

As a suitably qualified person under Section 4.2 of the *Flora Survey Guidelines* (detailed below), I certify that

- a. I have adhered to all statutory requirements and *Flora Survey Guidelines* requirements,
- b. In the area surveyed I have not found plants (as detailed in this report) that are currently listed as extinct, extinct in the wild, critically endangered, endangered, vulnerable or near threatened in the Nature Conservation (Plants) Regulation 2020; and
- a. The flora survey report is an accurate and full account of the flora survey

<b>Full Name</b>	Craig Eddie
<b>Signature</b>	
<b>Date</b>	26/09/2024

### Documentation to Support a Suitably Qualified Person

As per Section 4.2.1 of the *Flora Survey Guidelines*, a suitably qualified person is –

- a. A person who has 100 points or more, according to the self-assessment grading system below (Table 6); or
- b. A person whom the relevant Director or Executive Director of the department has agreed in writing is a suitably qualified person, due to the person possessing other high-level skills or experience that are equivalent.

Craig Eddie is a suitably qualified person as he has greater than 100 points according to the self-assessment grading system (Table 6).

Table 6    Justification for Craig Eddie as a Suitably Qualified Person

Criteria	Points Allocated	Justification
<b>Component 1: Qualification Knowledge and Ability</b>		
A relevant qualification from a recognised institution (e.g. University, TAFE) that results in a thorough knowledge of plant identification and flora surveys.	50	Bachelor of Applied Science (Natural Systems and Wildlife Management) Hons Class 1 (University of Queensland).
Regional ecosystem training by a recognised and qualified institution, such as the Queensland Herbarium.	5	Completed RE training provided by Qld Herbarium.  Field-based practical application of Queensland regional ecosystem framework including identification and mapping since 1999.

<b>Criteria</b>	<b>Points Allocated</b>	<b>Justification</b>
Member of a recognised group / certificate program relevant to ecology/botany, where skills/knowledge are demonstrated to be granted membership. E.g. Certified Environmental Practitioner (CEnvP) Program.	N/A	N/A
Lead author of articles/papers published in peer reviewed journals in relation to Qld flora surveys, Qld plant identification, or Qld <i>threatened plants or near threatened plants</i> .	<b>10</b>	Author of "Field Guide to Trees and Shrubs of Eastern Queensland Oil and Gas Fields" published by Santos which includes a section dedicated to threatened plants within the book coverage area.  Technical review for DESI of multiple threatened flora nomination submissions.
<b>Component 2: Field Experience</b>		
Experience within the last 2 years and a total of at least 5 years at leading flora surveys in a field-based environment at a rate of no less than 5 comprehensive botanical surveys that focus on locating and identifying threatened plants or near threatened plants, per year.	<b>60</b>	Refer to capability profile
Number of plant specimens you have collected that have been retained/incorporated into the Queensland Herbarium collection.	<b>40</b>	>3000 plant specimens submitted to Qld Herbarium with >1000 incorporated within the collection
<b>Total Points</b>	<b>165</b>	

## CAREER SUMMARY

2000 – Present	Principal Ecologist, BOOBOOK Ecological Consulting
1995 – 2006	Natural Resource Ranger, Qld. Parks & Wildlife Service (Roma)
1994 - 1995	Technician, Qld. Department of Primary Industries (Dalby)
1993 - 1994	Technician, Qld. Museum (Brisbane)

## EDUCATION

1993 Queensland	Bachelor of Applied Science Hons 1 – Natural Systems & Wildlife Management, University of Queensland
2010	Certificate IV Training and Assessment
2010	Diploma of Conservation and Land Management
2016	Certificate III Guiding

## SPECIAL ACHIEVEMENTS

B. App. Sc. Hons. 1, Graham Saunders Memorial Award

Honorary Technical Assistant, Queensland Museum

## OTHER RELEVANT TRAINING

Regional Ecosystem Framework: Identification and Classification

## PROFESSIONAL EXPERIENCE & SKILLS

### Environmental and Other Management Roles

Ecological assessment (include threatened flora searches) of numerous infrastructure associated with coal seam gas exploration, extraction and production, including wells, flow lines, gas plants, access tracks, quarries, camps, major pipelines, seismic lines and evaporation ponds

Pre-clearance ecological surveys for animal breeding places, rare and threatened flora, Special Least Concern Plants and weeds

Specialist knowledge of Arcadia, Fairview, Roma, Moonie, Denison, Combabula, Condabri and Talinga/Orana gas fields

Fauna and flora survey and management advice for various gas fields throughout Queensland

Weed identification, mapping, surveys and management advice

Preparation of fire and pest management plans

Impact and ecological assessments for numerous roads throughout southern inland and western Queensland

Environmental assessments for Fibre Optic Cable and Powerline easements in southern inland and western Queensland

Technical reviews for several Environmental Impact Statements

Biodiversity assessment of landholder properties for conservation planning and reserve acquisitions

Preparation and review of numerous ecological reports resulting from field surveys

## **Regulatory Approvals**

Preparation of *EPBC Act 1999* referrals associated with threatened species and ecosystems

Regional ecosystem mapping and applications for changes and PMAVs

## **Botanical Surveys**

1995 – 2007: flora surveys conducted in national parks and other reserves within Roma QPWS management district (Carnarvon, Expedition, Culgoa Floodplain, Alton, Palmgrove, Isla Gorge, Lonesome, Precipice, Thrushton and Narkoola National Parks) including compilation of species lists, management initiatives and submission of specimens to the Queensland Herbarium.

2000 – present: Targeted surveys for rare and threatened flora associated with coal seam gas infrastructure in eastern Queensland gas fields, particularly in the Injune, Rolleston, Roma, Miles, Chinchilla and Condamine areas

2000 – 2002: Flora surveys for significant road corridors Queensland Department of Main Roads southwest district

2002 – 2005: Audits of botanical values of public lands (roads, stock routes, camping reserves) throughout southern Queensland (Queensland Murray Darling Basin Committee)

2002 – present: On-going flora survey of Murra Murra and Bendee Downs (Cunnamulla, Kooma Traditional Owners)

2008: *Rutidosis lanata* survey Jackson Wandoan Road (Origin)

2008 – 2010: Flora survey of Saddler Springs, Carnarvon Range

2008 – 2009: *Acacia wardellii* monitoring (Origin)

2009: Gooimbah pipeline threatened flora survey

2010: Powerline easement threatened flora surveys (RPS)

2010: Ambre Felton coal mine threatened flora survey

2010-2011: Gladstone LNG Main Transmission Pipeline Pre-clearance Threatened Species Surveys

2013: Threatened flora surveys within roadworks sites in Maranoa Regional Council (NJ Contractors)

2013 – 2014: Pre-clearance threatened flora surveys within gathering line footprints at Condabri gas field

2014: Protected flora survey at Gurulmundi State Forest

2015: Threatened flora survey Jemena pipeline

2016: Fairview and Springwater Protected Plant Surveys

2016: Dooloogarah Protected Plants Survey

2016 - current: Flora survey of Wallaroo, Carnarvon Range

2017: Protected plants survey Eurombah Creek – Reedy Creek Interconnect gas transmission line

2017: *Melaleuca groveana* survey Injune – Rolleston Road (TMR)

2019: Fairview Protected Plants Survey

2019: Expedition Resource Reserve flora survey

2020: Lonesome Holding threatened flora survey

## **Specimen Collections**

Submission to and incorporation of over 2,100 plant voucher specimens in the Queensland Herbarium

## **Botanical Publications**

Author of “*Field Guide to Trees and Shrubs of Eastern Queensland Oil and Gas Fields*” prepared for Santos

## **Other Environmental Research**

Specialist knowledge of Australian land snails

Co-author of “*Brigalow Birds: birds of Myall Park Botanic Garden and Surrounding Region*”

Author of peer-reviewed journal articles relating to fauna of the Brigalow Belt

Specialist knowledge of Brigalow Belt and eastern Mulga Lands fauna and flora, particularly rare and threatened species

Compilation of substantial image library of Brigalow Belt fauna and flora, including threatened species.

# EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 26-Aug-2024

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

[Acknowledgements](#)

# Summary

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

<a href="#">World Heritage Properties:</a>	1
<a href="#">National Heritage Places:</a>	1
<a href="#">Wetlands of International Importance (Ramsar</a>	None
<a href="#">Great Barrier Reef Marine Park:</a>	None
<a href="#">Commonwealth Marine Area:</a>	None
<a href="#">Listed Threatened Ecological Communities:</a>	10
<a href="#">Listed Threatened Species:</a>	72
<a href="#">Listed Migratory Species:</a>	64

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

# Details

## Matters of National Environmental Significance

[ Resource Information ]			
World Heritage Properties			
Name	State	Legal Status	Buffer Status
<a href="#">Great Barrier Reef</a>	QLD	Declared property	In buffer area only

[ Resource Information ]			
National Heritage Places			
Name	State	Legal Status	Buffer Status
Natural <a href="#">Great Barrier Reef</a>	QLD	Listed place	In buffer area only

[ Resource Information ]			
Listed Threatened Ecological Communities			

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
<a href="#">Coastal Swamp Oak (<i>Casuarina glauca</i>)</a>	Endangered	Community may occurIn feature area	
<a href="#">Forest of New South Wales and South East Queensland ecological community</a>		within area	
<a href="#">Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland</a>	Endangered	Community may occurIn buffer area only	within area

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

### Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

### Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

# WildNet Records

## Species List

For the selected area of interest 31411.76 Custom input  
Current as at 26/08/2024 East

### Summary Information

The following table provides an overview of the area of interest: Custom input

**Table 1. Area of interest details**

Size (ha)	
31,411.76	
Local Government(s)	
Gladstone Regional	
Catchment(s)	
Curtis Island	
Coral Sea	
Calliope	
Bioregion(s)	Subregion(s)
Brigalow Belt	Marlborough Plains
Brigalow Belt	Mount Morgan Ranges
Southeast Queensland	Burnett - Curtis Hills and Ranges

**Protected Area(s)** The following estates and/or reserves are located in the area of interest:

Mount Stowe State Forest

Targinie State Forest

Calliope Conservation Park

Garden Island Conservation Park

**World Heritage Area(s)** The following World Heritage Areas are located in the area of interest:

Great Barrier Reef

### Ramsar Area(s)

No Ramsar Areas are located within the area of interest.

## **Introduction**

This WildNet report is derived from a spatial layer that is generated from the [WildNet database](#), managed by the Department of Environment, Science and Innovation. The layer, which is generated weekly, contains a subset of WildNet wildlife records that are not classed as erroneous or duplicate, that have a location precision equal to or less than 10000 metres and do not have a count of zero. It does not include aspatial data such as some baseline species lists created for some protected areas.

The WildNet dataset is constantly being enhanced and the taxonomic and status information revised. If a species is not listed in this report, it does not mean it doesn't occur there and listed species may also no longer inhabit the area. It is recommended that you also access other internal and external data sources for species information in your area of interest.

The [Species List Application](#) may provide additional information on species occurrence within your area of interest.

## **Species data**

Contextual location information is presented in Map 1.

Table 2 lists the animals recorded within the area of interest and its one kilometre buffer.

Table 3 lists the plants recorded within the area of interest and its one kilometre buffer.

Table 4 lists the fungi recorded within the area of interest and its one kilometre buffer.

Table 5 lists the other species recorded within the area of interest and its one kilometre buffer.

#### Species table headings and codes

**Taxon Id:** Unique identifier of the taxon from the WildNet database.

**NCA:** Queensland conservation status of the taxon under the *Nature Conservation Act 1992* (Least Concern (C), Critically Endangered (CR), Endangered (E), Extinct (EX), Near Threatened (NT), Extinct in the Wild (PE), Special Least Concern (SL), and Vulnerable (V)).

**EPBC:** Australian conservation status of the taxon under the *Environment Protection and Biodiversity Conservation Act 1999* (Conservation Dependent (CD), Critically Endangered (CE), Endangered (E), Extinct (EX), Vulnerable (V), and Extinct in the Wild (XW)).

**Specimens:** The number of specimen-backed records of the taxon.

**Records:** The total number of records of the taxon.

**Last record:** Date of most recent record of the taxon.

## Links and Support

Other sites that deliver species information from the [WildNet database](#) include:

- [Species profile search](#) - access species information approved for publication including species names, statuses, notes, images, distribution maps and records
- [Species lists](#) - generate species lists for Queensland protected areas, forestry areas, local governments and areas defined using coordinates
- [Biomaps](#) - view biodiversity information, including WildNet records approved for publication, and generate reports
- [Queensland Globe](#) - view spatial information, including WildNet records approved for publication
- [Qld wildlife data API](#) - access WildNet species information approved for publication such as notes, images and records etc.
- [WetlandMaps](#) - view species records, survey locations etc. approved for publication
- [WetlandSummary](#) - view wildlife statistics, species lists for a range of area types, and access WildNet species profiles
- [WildNet wildlife records - published - Queensland](#) - spatial layer of WildNet records approved for publication generated weekly
- [Generalised distribution and densities of Queensland wildlife](#) - Queensland species distributions and densities generalised to a 10 km grid resolution
- [Conservation status of Queensland wildlife](#) - access current lists of priority species for Queensland including nomenclature and status information
- [Queensland Confidential Species](#) - the list of species flagged as confidential in the WildNet database.

Please direct queries about this report to the WildNet Team [WildNet@des.qld.gov.au](mailto:WildNet@des.qld.gov.au).

Other useful sites for accessing Queensland biodiversity data include:

## Species List

For the selected area of interest 31411.76 Custom input  
Current as at 26/08/2024 Central

### Summary Information

The following table provides an overview of the area of interest: Custom input

**Table 1. Area of interest details**

Size (ha)	
31,411.76	
Local Government(s)	
Gladstone Regional	
Catchment(s)	
Calliope	
Fitzroy	
Bioregion(s)	Subregion(s)
Brigalow Belt	Mount Morgan Ranges
Southeast Queensland	Burnett - Curtis Hills and Ranges

**Protected Area(s)** The following estates and/or reserves are located in the area of interest:

Targinie State Forest  
Mount Stowe State Forest  
Calliope Conservation Park

### World Heritage Area(s)

No World Heritage Areas are located within the area of interest.

### Ramsar Area(s)

No Ramsar Areas are located within the area of interest.

### Introduction

This WildNet report is derived from a spatial layer that is generated from the [WildNet database](#), managed by the Department of Environment, Science and Innovation. The layer, which is generated weekly, contains a subset of WildNet wildlife records that are not classed as erroneous or duplicate, that have a location precision equal to or less than 10000 metres and do not have a count of zero. It does not include aspatial data such as some baseline species lists created for some protected areas.

The WildNet dataset is constantly being enhanced and the taxonomic and status information revised. If a species is not listed in this report, it does not mean it doesn't occur there and listed species may also no longer inhabit the area. It is recommended that you also access other internal and external data sources for species information in your area of interest.

The [Species List Application](#) may provide additional information on species occurrence within your area of interest.

## **Species data**

Contextual location information is presented in Map 1.

Table 2 lists the animals recorded within the area of interest and its one kilometre buffer.

Table 3 lists the plants recorded within the area of interest and its one kilometre buffer.

Table 4 lists the fungi recorded within the area of interest and its one kilometre buffer.

Table 5 lists the other species recorded within the area of interest and its one kilometre buffer.

## Map 1. Locality Map

**Table 2. Animals recorded within the area of interest and its one kilometre buffer**

Taxon Id	Class	Family	Scientific Name	Common Name	NCA	EPBC	Specimens	Records	Last record

**Table 4. Fungi recorded within the area of interest and its one kilometre buffer**

No species found within the area of interest and its one kilometre buffer.

**Table 5. Other species recorded within the area of interest and its one kilometre buffer**

No species found within the area of interest and its one kilometre buffer.

## Species table headings and codes

**Taxon Id:** Unique identifier of the taxon from the WildNet database.

**NCA:** Queensland conservation status of the taxon under the *Nature Conservation Act 1992* (Least Concern (C), Critically Endangered (CR), Endangered (E), Extinct (EX), Near Threatened (NT), Extinct in the Wild (PE), Special Least Concern (SL), and Vulnerable (V)).

**EPBC:** Australian conservation status of the taxon under the *Environment Protection and Biodiversity Conservation Act 1999* (Conservation Dependent (CD), Critically Endangered (CE), Endangered (E), Extinct (EX), Vulnerable (V), and Extinct in the Wild (XW)).

**Specimens:** The number of specimen-backed records of the taxon.

**Records:** The total number of records of the taxon.

**Last record:** Date of most recent record of the taxon.

## Links and Support

Other sites that deliver species information from the [WildNet database](#) include:

- [Species profile search](#) - access species information approved for publication including species names, statuses, notes, images, distribution maps and records
- [Species lists](#) - generate species lists for Queensland protected areas, forestry areas, local governments and areas defined using coordinates
- [Biomaps](#) - view biodiversity information, including WildNet records approved for publication, and generate reports
- [Queensland Globe](#) - view spatial information, including WildNet records approved for publication
- [Qld wildlife data API](#) - access WildNet species information approved for publication such as notes, images and records etc.
- [Wetland Maps](#) - view species records, survey locations etc. approved for publication
- [Wetland Summary](#) - view wildlife statistics, species lists for a range of area types, and access WildNet species profiles
- [WildNet wildlife records - published - Queensland](#) - spatial layer of WildNet records approved for publication generated weekly
- [Generalised distribution and densities of Queensland wildlife](#) - Queensland species distributions and densities generalised to a 10 km grid resolution
- [Conservation status of Queensland wildlife](#) - access current lists of priority species for Queensland including nomenclature and status information
- [Queensland Confidential Species](#) - the list of species flagged as confidential in the WildNet database.

Please direct queries about this report to the WildNet Team [WildNet@des.qld.gov.au](mailto:WildNet@des.qld.gov.au).

# WildNet Records

## Species List

For the selected area of interest 31411.76 Custom input  
Current as at 26/08/2024 West

### Summary Information

The following table provides an overview of the area of interest: Custom input

**Table 1. Area of interest details**

Size (ha)	
31,411.76	
Local Government(s)	
Gladstone Regional	
Catchment(s)	
Calliope	
Fitzroy	
Bioregion(s)	Subregion(s)
Brigalow Belt	Mount Morgan Ranges

### Protected Area(s)

No estates or reserves are located within the area of interest.

### World Heritage Area(s)

No World Heritage Areas are located within the area of interest.

### Ramsar Area(s)

No Ramsar Areas are located within the area of interest.

### Introduction

This WildNet report is derived from a spatial layer that is generated from the [WildNet database](#), managed by the Department of Environment, Science and Innovation. The layer, which is generated weekly, contains a subset of WildNet wildlife records that are not classed as erroneous or duplicate, that have a location precision equal to or less than 10000 metres and do not have a count of zero. It does not include aspatial data such as some baseline species lists created for some protected areas.

The WildNet dataset is constantly being enhanced and the taxonomic and status information revised. If a species is not listed in this report, it does not mean it doesn't occur there and listed species may also no longer inhabit the area. It is recommended that you also access other internal and external data sources for species information in your area of interest.

The [Species List Application](#) may provide additional information on species occurrence within your area of interest.

## **Species data**

Contextual location information is presented in Map 1.

Table 2 lists the animals recorded within the area of interest and its one kilometre buffer.

Table 3 lists the plants recorded within the area of interest and its one kilometre buffer.

Table 4 lists the fungi recorded within the area of interest and its one kilometre buffer.

Table 5 lists the other species recorded within the area of interest and its one kilometre buffer.

61	Reptilia	Varanidae	<i>Varanus varius</i>	lace monitor	C		0	1	3/18/2016

**Table 3. Plants recorded within the area of interest and its one kilometre buffer**

Taxon Id	Class	Family	Scientific Name	Common Name	NCA	EPBC	Specimens	Records	Last record
17767	Equisetopsida	Acanthaceae	<i>Brunoniella australis</i>	blue trumpet	C		0	3	2/15/2018
16262	Equisetopsida	Acanthaceae	<i>Rostellularia adscendens</i>		C		0	1	7/22/2010
33640	Equisetopsida	Acanthaceae	<i>Ruellia simplex</i>				1	1	3/21/1988
18101	Equisetopsida	Amaranthaceae	<i>Achyranthes aspera</i>		C		0	2	7/22/2010
18029	Equisetopsida	Amaranthaceae	<i>Alternanthera nana</i>	hairy joyweed	C		0	2	7/22/2010
17981	Equisetopsida	Amaranthaceae	<i>Amaranthus viridis</i>	green amaranth			1	1	12/16/2004
16424	Equisetopsida	Anacardiaceae	<i>Pleiogynium timorense</i>	Burdekin plum	C		0	1	8/2/1996
8144	Equisetopsida	Annonaceae	<i>Melodorum leichhardtii</i>		C		0	1	8/2/1996
9484	Equisetopsida	Apocynaceae	<i>Alstonia constricta</i>	bitterbark	C		0	1	8/2/1996
19732	Equisetopsida	Apocynaceae	<i>Alyxia ruscifolia</i>		C		0	1	8/2/1996
17935	Equisetopsida	Apocynaceae	<i>Asclepias curassavica</i>	red-head cottonbush			0	1	2/15/2018
9698	Equisetopsida	Apocynaceae	<i>Carissa ovata</i>	currantbush	C		1	5	2/15/2018
17710	Equisetopsida	Apocynaceae	<i>Catharanthus roseus</i>	pink periwinkle			1	1	12/16/2004
15479	Equisetopsida	Apocynaceae	<i>Cryptostegia grandiflora</i>	rubber vine			2	5	2/15/2018
17050	Equisetopsida	Apocynaceae	<i>Gomphocarpus physocarpus</i>	balloon cottonbush			1	3	2/15/2018
41654	Equisetopsida	Apocynaceae	<i>Leichhardtia microlepis</i>		C		0	1	7/22/2010
16521	Equisetopsida	Apocynaceae	<i>Parsonsia lanceolata</i>	northern silkpod	C		2	2	4/9/2013
16525	Equisetopsida	Apocynaceae	<i>Parsonsia plaeiophylla</i>		C		0	1	8/2/1996
11185	Equisetopsida	Apocynaceae	<i>Rauvolfia tetraphylla</i>				1	1	12/16/2004
8462	Equisetopsida	Araliaceae	<i>Polyscias elegans</i>	celery wood	C		0	1	8/2/1996
7563	Equisetopsida	Asparagaceae	<i>Asparagus africanus</i>	ornamental asparagus			1	1	5/22/1997
7566	Equisetopsida	Asparagaceae	<i>Asparagus plumosus</i>	feathered asparagus fern			0	1	8/2/1996
8885	Equisetopsida	Asparagaceae	<i>Asparagus racemosus</i>	native asparagus	C		1	1	7/5/2015

11158	Equisetopsida	Asteraceae	<i>Ageratum conyzoides</i>	billygoat weed			0	1	7/22/2010
22801	Equisetopsida	Asteraceae	<i>Ageratum conyzoides</i> subsp. <i>conyzoides</i>				0	1	2/15/2018
14051	Equisetopsida	Asteraceae	<i>Ageratum houstonianum</i>	blue billygoat weed			0	1	2/15/2018
22368	Equisetopsida	Asteraceae	<i>Bidens alba</i> var. <i>radiata</i>				1	1	12/16/2004
7691	Equisetopsida	Asteraceae	<i>Bidens pilosa</i>				0	3	2/15/2018
15570	Equisetopsida	Asteraceae	<i>Calyptocarpus vialis</i>	creeping cinderella weed			1	2	7/22/2010
14001	Equisetopsida	Asteraceae	<i>Cirsium vulgare</i>	spear thistle			1	1	12/16/2004
22237	Equisetopsida	Asteraceae	<i>Cyanthillium cinereum</i>		C		1	3	2/15/2018
15401	Equisetopsida	Asteraceae	<i>Emilia sonchifolia</i>				0	2	2/15/2018
15400	Equisetopsida	Asteraceae	<i>Emilia sonchifolia</i> var. <i>sonchifolia</i>				1	1	12/16/2004
41062	Equisetopsida	Asteraceae	<i>Lagenophora sublyrata</i>		C		1	1	3/23/1966
6540	Equisetopsida	Asteraceae	<i>Peripleura hispidula</i>		C		0	1	7/22/2010
8407	Equisetopsida	Asteraceae	<i>Praxelis clematidea</i>				1	1	5/6/2008
15129	Equisetopsida	Asteraceae	<i>Pterocaulon redolens</i>		C		0	2	2/15/2018
20003	Equisetopsida	Asteraceae	<i>Schkuhria pinnata</i>				2	2	1/15/2005
12208	Equisetopsida	Asteraceae	<i>Sigesbeckia orientalis</i>	Indian weed	C		1	1	12/16/2004
10450	Equisetopsida	Asteraceae	<i>Tithonia diversifolia</i>	Japanese sunflower			1	1	12/16/2004
36235	Equisetopsida	Asteraceae	<i>Verbesina encelioides</i> var. <i>encelioides</i>				1	1	12/16/2004
22235	Equisetopsida	Asteraceae	<i>Xanthium occidentale</i>				1	1	12/16/2004
21766	Equisetopsida	Asteraceae	<i>Zinnia</i>		C		0	1	8/2/1996
10411	Equisetopsida	Asteraceae	<i>Zinnia peruviana</i>	wild zinnia			1	2	7/22/2010
25558	Equisetopsida	Aytoniaceae	<i>Asterella drummondii</i>		C		1	1	6/24/2011
11266	Equisetopsida	Basellaceae	<i>Anredera cordifolia</i>	Madeira vine			1	1	12/16/2004
16570	Equisetopsida	Bignoniaceae	<i>Pandorea pandorana</i>	wonga vine	C		0	1	8/2/1996

11193	Equisetopsida	Boraginaceae	<i>Heliotropium amplexicaule</i>	blue heliotrope			2	2	12/16/2004
13719	Equisetopsida	Boraginaceae	<i>Trichodesma zeylanicum</i> var. <i>zeylanicum</i>		C		0	1	2/15/2018
42136	Equisetopsida	Brassicaceae	<i>Erucastrum austroafricanum</i>				1	1	12/15/2004
19352	Equisetopsida	Cactaceae	<i>Opuntia stricta</i>				0	3	2/15/2018
9535	Equisetopsida	Cactaceae	<i>Opuntia tomentosa</i>	velvety tree pear			0	1	2/15/2018
17725	Equisetopsida	Capparaceae	<i>Capparis arborea</i>	brush caper berry	C		0	1	8/2/1996
13984	Equisetopsida	Capparaceae	<i>Capparis canescens</i>		C		0	1	2/15/2018
18014	Equisetopsida	Casuarinaceae	<i>Allocasuarina torulosa</i>		C		0	1	2/15/2018
13995	Equisetopsida	Casuarinaceae	<i>Casuarina cunninghamiana</i> subsp. <i>cunninghamiana</i>		C		0	1	2/15/2018
34775	Equisetopsida	Celastraceae	<i>Denhamia cunninghamii</i>		C		0	2	7/22/2010
34776	Equisetopsida	Celastraceae	<i>Denhamia disperma</i>		C		0	1	2/15/2018
22222	Equisetopsida	Celastraceae	<i>Elaeodendron australe</i> var. <i>australe</i>		C		1	1	4/20/1997
22226	Equisetopsida	Celastraceae	<i>Elaeodendron melanocarpum</i>		C		0	1	8/2/1996
15034	Equisetopsida	Celastraceae	<i>Siphonodon australis</i>	ivorywood	C		0	1	8/2/1996

**Table 4. Fungi recorded within the area of interest and its one kilometre buffer**

No species found within the area of interest and its one kilometre buffer.

**Table 5. Other species recorded within the area of interest and its one kilometre buffer**

No species found within the area of interest and its one kilometre buffer.

#### Species table headings and codes

**Taxon Id:** Unique identifier of the taxon from the WildNet database.

**NCA:** Queensland conservation status of the taxon under the *Nature Conservation Act 1992* (Least Concern (C), Critically Endangered (CR), Endangered (E), Extinct (EX), Near Threatened (NT), Extinct in the Wild (PE), Special Least Concern (SL), and Vulnerable (V)).

**EPBC:** Australian conservation status of the taxon under the *Environment Protection and Biodiversity Conservation Act 1999* (Conservation Dependent (CD), Critically Endangered (CE), Endangered (E), Extinct (EX), Vulnerable (V), and Extinct in the Wild (XW)).

**Specimens:** The number of specimen-backed records of the taxon.

**Records:** The total number of records of the taxon.

**Last record:** Date of most recent record of the taxon.

#### Links and Support

Other sites that deliver species information from the [WildNet database](#) include:

- [Species profile search](#) - access species information approved for publication including species names, statuses, notes, images, distribution maps and records
- [Species lists](#) - generate species lists for Queensland protected areas, forestry areas, local governments and areas defined using coordinates
- [Biomaps](#) - view biodiversity information, including WildNet records approved for publication, and generate reports
- [Queensland Globe](#) - view spatial information, including WildNet records approved for publication
- [Qld wildlife data API](#) - access WildNet species information approved for publication such as notes, images and records etc.
- [WetlandMaps](#) - view species records, survey locations etc. approved for publication
- [WetlandSummary](#) - view wildlife statistics, species lists for a range of area types, and access WildNet species profiles
- [WildNet wildlife records - published - Queensland](#) - spatial layer of WildNet records approved for publication generated weekly
- [Generalised distribution and densities of Queensland wildlife](#) - Queensland species distributions and densities generalised to a 10 km grid resolution
- [Conservation status of Queensland wildlife](#) - access current lists of priority species for Queensland including nomenclature and status information
- [Queensland Confidential Species](#) - the list of species flagged as confidential in the WildNet database.

Please direct queries about this report to the WildNet Team [WildNet@des.qld.gov.au](mailto:WildNet@des.qld.gov.au).

## **Flora Species List**

## Appendix D Flora Species List

Table 7 Flora species list

Family	Scientific Name	NC Act Status
Malvaceae	<i>Abutilon</i> sp.	-
Leguminosae	<i>Acacia decora</i>	Least concern
Leguminosae	<i>Acacia disparrima</i>	Least concern
Leguminosae	<i>Acacia excelsa</i>	Least concern
Leguminosae	<i>Acacia fasciculifera</i>	Least concern
Leguminosae	<i>Acacia holosericea</i>	Least concern
Leguminosae	<i>Acacia implexa</i>	Least concern
Leguminosae	<i>Acacia leiocalyx</i>	Least concern
Leguminosae	<i>Acacia maidenii</i>	Least concern
Leguminosae	<i>Acacia melanoxylon</i>	Least concern
Leguminosae	<i>Acacia salicina</i>	Least concern
Leguminosae	<i>Acacia</i> sp.	-
Leguminosae	<i>Acacia</i> sp. indet. (infertile)	-
Asteraceae	<i>Ageratum conyzoides</i> *	-
Asteraceae	<i>Ageratum houstonianum</i> *	-
Lamiaceae	<i>Ajuga australis</i>	Least concern
Leguminosae	<i>Albizia lebbeck</i> *	-
Euphorbiaceae	<i>Alchornea ilicifolia</i>	Least concern
Rhamnaceae	<i>Alphitonia excelsa</i>	Least concern
Amaranthaceae	<i>Alternanthera pungens</i> *	-
Apocynaceae	<i>Alyxia ruscifolia</i>	Least concern
Polygonaceae	<i>Antigonon leptopus</i> *	-
Araucariaceae	<i>Araucaria cunninghamii</i>	Least concern
Papaveraceae	<i>Argemone mexicana</i> *	-
Papaveraceae	<i>Argemone ochroleuca</i> *	-

Family	Scientific Name	NC Act Status
Apocynaceae	<i>Asclepias curassavica</i> *	-
Asteraceae	<i>Aster subulatus</i> *	-
Salviniaceae	<i>Azolla</i> sp.	-
Asteraceae	<i>Bidens pilosa</i> *	-
Poaceae	<i>Bothriochloa bladhii</i>	Least concern
Sterculiaceae	<i>Brachychiton australis</i>	Special least concern
Sterculiaceae	<i>Brachychiton bidwillii</i>	Special least concern
Phyllanthaceae	<i>Breynia oblongifolia</i>	Least concern
Phyllanthaceae	<i>Bridelia leichhardtii</i>	Least concern
Crassulaceae	<i>Bryophyllum delagoense</i> *	-
Crassulaceae	<i>Bryophyllum x houghtonii</i> *	-
Capparaceae	<i>Capparis canescens</i>	Least concern
Sapindaceae	<i>Cardiospermum grandiflorum</i> *	-
Apocynaceae	<i>Carissa ovata</i>	Least concern
Apocynaceae	<i>Cascabela thevetia</i> *	-
Casuarinaceae	<i>Casuarina cunninghamiana</i>	Least concern
Asteraceae	<i>Centipeda minima</i>	Least concern
Leguminosae	<i>Chamaecrista rotundifolia</i> *	-
Pteridaceae	<i>Cheilanthes sieberi</i>	Least concern
Poaceae	<i>Chloris gayana</i> *	-
Asteraceae	<i>Cirsium vulgare</i> *	-
Vitaceae	<i>Clematicissus opaca</i>	Least concern
Lamiaceae	<i>Clerodendrum floribundum</i>	Least concern
Rubiaceae	<i>Coelospermum reticulatum</i>	Least concern
Convolvulaceae	Convolvulaceae sp.	Least concern
Myrtaceae	<i>Corymbia citriodora</i>	Least concern
Myrtaceae	<i>Corymbia erythrophloia</i>	Least concern

Family	Scientific Name	NC Act Status
Myrtaceae	<i>Corymbia intermedia</i>	Least concern
Myrtaceae	<i>Corymbia tessellaris</i>	Least concern
Myrtaceae	<i>Corymbia torelliana*</i>	Least concern
Fabaceae	<i>Crotalaria</i> sp.	-
Apocynaceae	<i>Cryptostegia grandiflora*</i>	-
Cucurbitaceae	Cucurbitaceae sp.	-
Sapindaceae	<i>Cupaniopsis anacardiooides</i>	Least concern
Asteraceae	<i>Cyanthillium cinereum</i>	Least concern
Rubiaceae	<i>Cyclophyllum coprosmoides</i>	Least concern
Juncaginaceae	<i>Cynogeton</i> sp.	-
Orchidaceae	<i>Cymbidium canaliculatum</i>	Special least concern
Poaceae	<i>Cymbopogon refractus</i>	Least concern
Poaceae	<i>Cynodon dactylon*</i>	-
Cyperaceae	<i>Cyperus concinnus</i>	Least concern
Cyperaceae	<i>Cyperus difformis</i>	Least concern
Cyperaceae	<i>Cyperus involucratus*</i>	
Cyperaceae	<i>Cyperus gracilis</i>	Least concern
Celastraceae	<i>Denhamia cunninghamii</i>	Least concern
Celastraceae	<i>Denhamia disperma</i>	Least concern
Hemerocallidaceae	<i>Dianella caerulea</i>	Least concern
Hemerocallidaceae	<i>Dianella longifolia</i>	Least concern
Hemerocallidaceae	<i>Dianella brevipedunculata</i>	Least concern
Poaceae	<i>Dichanthium sericeum</i>	Least concern
Bignoniaceae	<i>Dolichandra unguis-cati*</i>	-
Verbenaceae	<i>Duranta erecta*</i>	-
Poaceae	<i>Echinochloa colona*</i>	-
Poaceae	<i>Eragrostis</i> sp.	-

Family	Scientific Name	NC Act Status
Asteraceae	<i>Erigeron bonariensis</i> *	-
Leguminosae	<i>Erythrina vespertilio</i>	Least concern
Myrtaceae	<i>Eucalyptus crebra</i>	Least concern
Myrtaceae	<i>Eucalyptus moluccana</i>	Least concern
Myrtaceae	<i>Eucalyptus populnea</i>	Least concern
Myrtaceae	<i>Eucalyptus tereticornis</i>	Least concern
Euphorbiaceae	<i>Euphorbia hirta</i> *	-
Euphorbiaceae	<i>Euphorbia drummondii</i>	Least concern
Laxmanniaceae	<i>Eustrephus latifolius</i>	Least concern
Convolvulaceae	<i>Evolvulus alsinoides</i>	Least concern
Moraceae	<i>Ficus coronata</i>	Least concern
Moraceae	<i>Ficus opposita</i>	Least concern
Moraceae	<i>Ficus rubiginosa</i>	Least concern
Rutaceae	<i>Flindersia australis</i>	Least concern
Leguminosae	<i>Glycine</i> sp.	-
Apocynaceae	<i>Gomphocarpus physocarpus</i> *	-
Apocynaceae	<i>Gomphocarpus</i> sp*	-
Amaranthaceae	<i>Gomphrena celosioides</i> *	-
Sparrmanniaceae	<i>Grewia latifolia</i>	Least concern
Boraginaceae	<i>Heliotropium amplexicaule</i> *	-
Poaceae	<i>Heteropogon contortus</i>	Least concern
Malvaceae	<i>Hibiscus heterophyllus</i>	Least concern
Euphorbiaceae	<i>Homalanthus populifolius</i>	Least concern
Poaceae	<i>Hyparrhenia rufa</i> *	-
Poaceae	<i>Imperata cylindrica</i>	Least concern
Sapindaceae	<i>Jagera pseudorhus</i>	Least concern
Oleaceae	<i>Jasminum didymum</i>	Least concern

Family	Scientific Name	NC Act Status
Oleaceae	<i>Jasminum simplicifolium</i>	Least concern
Juncaceae	<i>Juncus usitatus</i>	Least concern
Verbenaceae	<i>Lantana camara</i> *	-
Verbenaceae	<i>Lantana montevidensis</i> *	-
Leguminosae	<i>Leucaena leucocephala</i> *	-
Arecaceae	<i>Livistona australis</i>	Special least concern
Campanulaceae	<i>Lobelia concolor</i>	Special least concern
Laxmanniaceae	<i>Lomandra longifolia</i>	Least concern
Myrtaceae	<i>Lophostemon suaveolens</i>	Least concern
Onagraceae	<i>Ludwigia octovalvis</i>	Least concern
Leguminosae	<i>Macroptilium lathyroides</i> *	-
Leguminosae	<i>Macroptilium atropurpureum</i> *	-
Chenopodiaceae	<i>Maireana microphylla</i>	Least concern
Euphorbiaceae	<i>Mallotus philippensis</i>	Least concern
Malvaceae	<i>Malvastrum americanum</i> *	-
Poaceae	<i>Megathyrsus maximus</i> *	-
Myrtaceae	<i>Melaleuca bracteata</i>	Least concern
Myrtaceae	<i>Melaleuca nervosa</i>	Least concern
Myrtaceae	<i>Melaleuca</i> sp.	-
Myrtaceae	<i>Melaleuca viminalis</i>	Least concern
Meliaceae	<i>Melia azedarach</i>	Least concern
Poaceae	<i>Melinis repens</i> *	-
Nymphaeaceae	<i>Nymphaea caerulea</i> *	-
Poaceae	<i>Oplismenus aemulus</i>	Least concern
Cactaceae	<i>Opuntia stricta</i> *	-
Cactaceae	<i>Opuntia tomentosa</i> *	-
Oxalidaceae	<i>Oxalis</i> sp.*	-

Family	Scientific Name	NC Act Status
Poaceae	<i>Panicum effusum</i>	Least concern
Apocynaceae	<i>Parsonia eucalyptophylla</i>	Least concern
Asteraceae	<i>Parthenium hysterophorus*</i>	-
Poaceae	<i>Paspalum distichum*</i>	-
Passifloraceae	<i>Passiflora suberosa*</i>	-
Picridendraceae	<i>Petalostigma pubescens</i>	Least concern
Poaceae	<i>Phragmites australis</i>	Least concern
Solanaceae	<i>Physalis sp.*</i>	-
Pittosporaceae	<i>Pittosporum spinescens</i>	Least concern
Lecythidaceae	<i>Planchonia careya</i>	Least concern
Poaceae	Poaceae sp	-
Araliaceae	<i>Polyscias elegans</i>	Least concern
Rubiaceae	<i>Psydrax odorata</i>	Least concern
Asteraceae	<i>Pterocaulon redolens</i>	Least concern
Rubiaceae	<i>Richardia brasiliensis*</i>	-
Euphorbiaceae	<i>Ricinus communis*</i>	-
Petiveriaceae	<i>Rivina humilis*</i>	-
Acanthaceae	<i>Ruellia simplex*</i>	-
Cyperaceae	<i>Scleria sp.</i>	-
Leguminosae	<i>Senna pendula*</i>	-
Malvaceae	<i>Sida cordifolia*</i>	-
Malvaceae	<i>Sida hackettiana</i>	Least concern
Malvaceae	<i>Sida sp.</i>	-
Malvaceae	<i>Sida rhombifolia*</i>	-
Asteraceae	<i>Sigesbeckia orientalis</i>	Least concern
Solanaceae	<i>Solanum torvum*</i>	-
Solanaceae	<i>Solanum americanum*</i>	-

Family	Scientific Name	NC Act Status
Solanaceae	<i>Solanum seaforthianum</i> *	-
Asteraceae	<i>Sonchus oleraceus</i> *	-
Poaceae	<i>Sporobolus pyramidalis</i> *	-
Verbenaceae	<i>Stachytarpheta jamaicensis</i> *	-
Leguminosae	<i>Stylosanthes scabra</i> *	-
Asteraceae	<i>Symphyotrichum subulatum</i> *	-
Poaceae	<i>Themeda quadrivalvis</i> *	-
Typhaceae	<i>Typha domingensis</i>	Least concern
Typhaceae	<i>Typha orientalis</i>	Least concern
Leguminosae	<i>Vachellia farnesiana</i> *	-
Verbenaceae	<i>Verbena bonariensis</i> *	-
Viscaceae	<i>Viscum articulatum</i>	Least concern
Asteraceae	<i>Xanthium occidentale</i> *	-
